DETAILED ACTION

Election/Restrictions

1. Upon further consideration, Examiner has withdrawn the restriction requirement set forth in the Requirement for Restriction/Election mailed on 16 November 2004. Accordingly, all pending claims have been examined in this Office Action.

Allowable Subject Matter

2. Claims 1-17 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fails to teach or suggest one or more of the limitations found in independent claims 1, 4, 8, and 14. U.S. Patent Application Publication No. 2002/0122308 to Ikeda teaches a similar system to that of the present application. However, with respect to independent claims 1 and 4, Ikeda, as well as the other prior art of record, fails to teach or suggest a test current supply unit adapted to supply a test current to the light-emitting element when the light-emitting element is switched off. With respect to independent claims 8 and 12, Ikeda, as well as the other prior art of record, fails to teach or suggest a test current supply unit adapted to supply a test current to the light-emitting element when the light-emitting element is switched off; and an arithmetic unit adapted to carry out an arithmetic operation for respective terminal

voltages of the plurality of light-emitting elements supplied with the test current from the test current supply unit.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

5. Claim 18 is rejected under 35 U.S.C. 102(a) as being anticipated by U.S. Patent Application Publication No. 2002/0122308 to Ikeda.

With respect to claim 18, Ikeda teaches a light-emitting element driving device comprising a first control unit (41 in figure 22) adapted to control a drive voltage applied from a voltage source to a light-emitting element; and a second control unit (42 in figure 22) adapted to control a drive current supplied from a current source to the light-emitting element, wherein the first control unit and the second control unit controls an light intensity of a light beam emitted from the light-emitting element, wherein the first control unit sets a voltage of the voltage source in accordance with a voltage generated in the light-emitting element as a result of the control of the drive current by the second control unit (paragraphs 0208-0232).

Citation of Pertinent References

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patent documents further show the state of the art with respect to light-emitting element driving devices:
